

WHAT IS CLAIMED IS:

1. An anchor for positioning in an opening of a surface, the anchor comprising:

a first generally flat portion having a slot formed therein, the slot having a longitudinal centerline;

- 5 a second generally flat portion having a slot formed therein, the slot having a longitudinal centerline coincident on a line with the longitudinal centerline of the slot of the first flat portion, the second generally flat portion including at least one opening formed therein that defines an attachment ring;

- 10 a hinge that connects the first and second flat portions at ends opposite open ends of the slots;

a latch rotatably connected to the first flat portion; and

a pin for releasably connecting the latch to the second flat portion to thereby secure the anchor in an unfolded position.

- 15 2. The anchor of claim 1 wherein the second generally flat portion includes a second opening formed therein that defines a second attachment ring.

3. The anchor of claim 1 further comprising a fastener that rotatably connects the latch to the first flat portion.

20

4. The anchor of claim 1 wherein the latch includes a body portion and a latch portion, the body portion and the latch portion forming a recess to receive the second flat portion.

5. The anchor of claim 4 wherein the latch includes a latch handle.
